	_gmag, _ask, _mom, _esa_pkt						
2029	From Hannes		Hannes	3	Aaron		
2029a	Provided is the most common plot used by scientists that look at magnetic field data. Four panels Bx By Bz Bt and the position X Y Z		Hannes	3	Aaron		
	as variables. Often the radial distance R is another variable. It would						
	be great if someone enters e.g. tplot, 'tha_fgs_gsm' such a useful						
	default plot would appear. I am currently not able to produce such a						
	plot using tplot. Another useful plot would be instead of one trace per						
	panel, 5 traces per panel. One for each spacecraft and 5 sets of positions as variables at the bottom. For example: tplot, th?_fgs_gsm'						
	could produce such a plot. Also some standard plots that combine						
	ground and spacecraft data could be useful. Notes from Vassilis:						
	define keyword /positions default 'none', allow GSM X Y Z, R Lat						
00001	Long,						
2029b	The level 2 CDF files at http://themis.ssl.berkeley.edu/data_download.shtml should contain		Hannes	3	Aaron		
	position in various coordinate systems as well. Preferably in the same						
	resolution as the data. Otherwise Scientists need to get the position						
	from another source. Notes from Vassilis: option to introduce the data						
	in RE with keyword (one RE =6,478 kilometers ???). Like thm_load_fgm /pos_units= 'RE'. Also thm_load_state keyword						
	tnm_load_tgm /pos_units= RE . Also tnm_load_state keyword out_coord = 'GSM', 'GSE',etc.						
2029c	If one loads fgm data from probe 'a' and let's say there are no data for		Hannes	3	Aaron		
	the chosen interval. The variables tha_fgl and tha_fgl_gsm etc.				. 101011		
	should all be empty. It could be those variables still contain data from						
0000	the previously loaded interval.						
2030	upgrade thm_load to work with probe assignments		Vassilis	3	Aaron

2080	Phantom packets" cause non-monotonic distribution times. BugzID=25, low priority.		Vassilis	3	Jim L	
2081	Evaluate CDF compression algorithms BugZid=81		Vassilis	3	Jim L	
2083	Add "last processed" time to L1 (and L2?) CDFs BugZid=115		Vassilis	3	Jim L	
2084	. transforming one data point from SM coordinates to GSM coordinates. ct=time_double('2008-02-16/04:50:00') dipole=[[0],[0],[1]] v=[1,2,3] store_data,'dipole_sm',data={x:ct,y:dipole,v:v} cotrans,'dipole_sm','dipole_gsm',/SM2GSM cotrans,'dipole_gsm','dipole_gse',/GSM2GSE get_data,'dipole_gse',data=dipole_gse xdipgse=dipole_gse.y[0] ydipgse=dipole_gse.y[1] zdipgse=dipole_gse.y[2] tilt=atan(xdipgse,zdipgse) When I check the data for 'dipole_gsm', the values are 0,0,0. I'm not sure what they SHOULD be, but I know that their magnitude should equal 1. sqrt(x^2+y^2+z^2)=1		Christine	3	Jim L	
	Jim M					

3006	While looking at some plotting issues Jim McTiernan and I found an issue with the burst summary plots. Maybe that this was intended some time ago but I don't think it's right. I attach two plots. The file Tohban_esaburst_20091201_0024.png is what you get on the web site. The bursts on THA, THD, and THE all appear as about 6 hours long. My own plot burst_20091201.gif shows all the bursts with their correct time durations. Somehow the overview plot routing extends each burst by something like +-3 hours. I don't think that this is correct and I suggest it should be changed.	12/8/2009	Vassilis	0	Jim M	reprocessing necessary in January
	March 1-15 mosaics should get reprocessed look into the web page, and see why we don't get ESA after 2:30 and the FBKs are corrupted for 1-3UT	12/9/2009 12/9/2009	Harald Vassilis	0	Jim M Jim M	March 1 and second processor on March 8 ESA is now fine and FBK was bad packet
3005 3004	Stop Mosaic Processing before Power outage Check all jobs on January 4th to make sure they have restarted	12/7/2009 12/7/2009	Jim M David	0	Jim M all	Jim L, Jim M and Pat
2270	gmag warnings - blank site names	10/19/2009	David	0	Jim M	if data is missing then we will investigate
2999	legends in temperature plots - in progress	Andrei	11/30/2009	1	Jim M	Up now, so moments match temperature legends all the same. Vassilis to verify.
2296	The labels for T_para, T_perp on the overview plots have been switched so that the correct color label refers to the correct value: green is Ti_para, blue is Ti_perp, black is Te_para and red is Te_perp. This change will show up today, and will cover the last 10 days of plots.	11/19/2009	Andrei	1	Jim M	Mod complete and last 10 days reprocessed. A full reprocessing is in January.
2282	Problems with onboard moments during solar wind are probably only a ground software issue. (There was some mis-communication between Davin and I about changes that never took place which caused some confusion.) Ground software has never been modified to handle solar wind mode moments Davin is working on a modification that can at least allow him to check that the data is ok. There could potentially be other problems so we requested from Deron and John that they send us a copy of the EPROM data in a format easy to read so we can check that the onboard tables are what we think they are. For now we are pretty sure they are correct and the data should be fine. I think Davin will make a simple code change that will allow him to tell moments code to assume SW mode when decommutating moment packets. This should allow him to quickly test that the data is fine.	11/2/2009	Jim Mcfadden	1	Jim M	Davin is writing code - Vassilis will talk to him
2056	SCM L2 cdf		Vassilis	1	Jim M	will email Olivier with differences - eta 12/7
2228	one outstanding issue with THM_LOAD/THM_CAL_EFI is that for some reason when I ask for the calibrated data in SPG (which should just be adjustment of gains and offsets, and conversion from ADC units to physical units, the code is trying to do some despin operations. Since this has direct impact on my ability to evaluate the EFI data quality,	9/3/2009	John Bonnell	1	Jim M	fix awaiting JB review, eta 10/15
2225	L2 EFI cdf (quality flags)	8/31/2004	Vassilis	1	Jim M	in progress all done except quality flags. That to come 10/15. Then test files to be sent to SPDF and Jon Bonnell
2269	A-E Index processing failing every day make FGM keywords standard for L2 Processing.	12/7/2009 10/19/2009	Jim L FGM Team	1 2+	Jim M Jim M	check on 12/14 if fix worked on hold until until Jan 4th(after AGU and FGM reprocessing)
	Data Variable Descriptions Document - Review L2 SST cdf revisions	12/4/2009 8/31/2004	David Vassilis	2+ 2+	Jim M Jim M	awaiting SST calibrations

3000b 2288	Review and update if needed Variable Desc Document had expected that this cotrans would occur at the very end, after all the calibration code. But the calibration itself seems to be affected, as reflected in the following differences between the log messages before/after rev 6929:	12/3/2009 11/12/2009	David Jim	2+	Jim M Jim M	for L2 cdf variables see 2256
2057	SCM CAL File Processing Doc		Vassilis	2	Jim M	text completed. Put into std document format and send to Olivier for review
2283	There is another aspect to this problem. Dead-time corrections are severe for ion ESA SW data and there are no dead-time corrections for onboard moments. Some algorithm will have to be developed that does this correction after the fact. Davin developed an algorithm like this for Wind 3DP. That algorithm may not work directly due to differences in energy sweeps, but something like it could be developed for THEMIS. Davin and I can provide some advice and direction. Similarly electron onboard moments in the SW may also need some corrections this should also be worked out at the same time.	11/2/2009	Jim Mcfadden	2	Jim M	ALL SOLID OF THE TOTAL AND THE

	tplot does not fail gracefully after illegal margin set. In this case: tplot_options, 'xmargin',[100,100], tplot does not fail gracefully after illegal margin set. In this case: tplot_options, 'xmargin',[-1,-1] -tplot does not fail gracefully after illegal margin set. In this case: tplot_options, 'ymargin',[100,100]			2	Pat		40
	if you want to load a template, you need to pass the template path in via a keyword, or select an option to open it from the THEMIS->File Menu. I think we should consider adding the template path to the configuration file that we save, so that it can be loaded automatically.	10/19/2009	Pat	2	Pat		
	I ran into a small annoyance today when loading a themis document. I had originally loaded ESA and SST data for one time period, then overwrote that data by loading the same quantities but for a different time period. I did this several times and then saved the document for later. When re-opening the document I got a series of prompts asking whether I would like to re-write each quantity. It would speed up and streamline the process in this case if data that was later overwritten is not loaded when you open the document.	7/20/2009	Aaron	2	Pat	I spoke to Pat about this yesterday and we both agreed that while we cannot be sure which quantities should be re-loaded and which shouldn't (some may have been used temporarily for calculations). However, we can store the users's original choice to overwrite the data or not. So while we may not be able to save on loading time we can still keep the user from having to click multiple messages and from having to remember what they chose originally. The latter is particularly important since they may receive errors or get corrupted data if they do not choose the correct option	
	One feature that was never implemented for the mini-language is globbing. (The ability to use '*' and '?' to reference multiple tplot variables at once.) This is a feature that is standard with many of our other tplot data processing routines. I think it would be very useful to include in the mini-language.	8/5/2009	Pat	2	Pat		
2187	I noticed a bug in the x-axis options panel. It probably also applies to the y-axis options. If the set-all button is selected on the grid tab, then changing panels doesn't update the settings on the grid tab to the settings currently displayed for that panel.	7/29/2009	Pat	2	Pat	set to most recent user action for all routines	
2041	thm_load_state out_coord velocity calculations wrong		Vassilis	2	Pat		
	Christine brought to my attention a bug that occurs if you use the TDAS tsyganenko routines in a way that is not really something that I expected, but seems to be a legitimate use of the routines. If passing in a set of input parameters that are stored in tplot variables but are not in time-series, the routine produces incorrect results.	11/4/2009	Christine	2	Pat		
	EPO-GMAG msgs: modify the script and only issue this message if > 2 days	12/8/2009	David	3	Pat		
	How's it going with the stats? I noticed the query takes some time because it's looking at the whole table. It could be refined for specific time periods. The delay in return could be what's causing Dave to have access problems - or the SSL firewall?	10/23/2009	Tim	3	Pat	see 2277	
	I didn't realize the cotrans messed up the velocities for earth centered coordinates. Maybe what we really need to do is modify cotrans so that it correctly transforms velocities. Users can incorrectly transform velocities just as easily using thm_cotrans on the command line, as they can using the coord keyword.		Pat/Jim L	3	Pat		
	I loaded a plot which had the line color as white. Because the legend plots in the same color as the line, the legend text did not show up. We should probably just put in a check for this case. If the line is white and the background is white then draw the text in black		Pat	3	Pat		
	Problem with edit3dbins is being caused by IDL's mouse system variable not being updated correctly on Macs. The ctime procedure, used to interactively select a time from a tplot window, relies on this variable to determine when a selection has been made in the tplot window. If the variable is never updated then ctime gets caught in an infinite loop. It's unclear whether this is specific to a particular OS version, but the routine should probably be modified at some point to maximize compatibility with Macs. In the meantime the alternate method of calling gettime that I copied you on yesterday should provide a temporary way around this bug.		Aaron	3	Pat	verify note in quick reference guide and then task will be closed	4-8 hrs
	Add the ability to right-click on a variable in the widget-tree and display a popup with basic information about the quantity such as dimensions, range, or other meta data as well as the ability to rename variable		Pat	3	Pat	originally part of task 64, however, after further evaluation, it was determined this best belonged with the widget tree rather than the analysis window	4 hrs
	I found a small bug in the z-axis panel in the gui. If I change the z-axis annotation size of a layout with 2-panels each with one spectrogram, when I apply this change, it gets applied to both panels, even if set-all is off.	8/27/2009	Pat	3	Pat		
	Mica						16-24 hour
